

CLEARFIELD® JNZ Wheat

CLEARFIELD® JNZ is part of the CLEARFIELD production system for wheat providing outstanding control of hard to kill weeds when used with the robust Midas® herbicide.

CLEARFIELD JNZ is a derivative of the conventional Janz variety with tolerance to the Imidazolinone herbicide, Midas. As a result of this CLEARFIELD JNZ will exhibit very similar agronomic traits to the conventional variety.

CLEARFIELD JNZ has shown an improved quality profile with:

- Decreased screenings compared to Janz
- Increased grain weight
- Increased hectolitre weight
- Improved protein levels

VARIETY CHARACTERISTICS

Classification:	AH
Maturity:	Mid maturity
Growth Height:	Medium height
Rainfall:	Suitable for rainfall areas <400mm – 500mm
Yield:	Very similar to the conventional Janz variety

Disease:

Stem rust:	Good resistance to stem rust
Leaf rust:	Moderately susceptible
Stripe rust:	Moderately susceptible
CCN:	Susceptible
<i>Septoria tritici</i> :	Moderately susceptible

Growers can source CLEARFIELD JNZ seed direct from other growers or seed merchants. It is highly recommended to seek appropriate seed test results prior to purchase to confirm herbicide tolerance to CLEARFIELD herbicide products and other seed quality parameters such as germination and purity.

Growers can purchase their Midas herbicide from CLEARFIELD AgriCentres. Information can be sourced at www.agricentre.com.au

The CLEARFIELD system for wheat is an important solution for improved weed management, sustainable crop rotations and increased profitability for Australian growers.
